

CASE STUDY

INTEGRATED SERVICES AND SOLUTIONS - A PROACTIVE APPROACH TO ACCELERATE TIME TO MARKET

THE CHALLENGE

A US-based company was developing its first biologic molecule. The company, experienced with small molecules and oral drugs, was less familiar with the complexities surrounding biologic containment needs. With limited resources and less expertise in biologics, the company foresaw risk and potential delays to their drug development timeline.

THE CONSIDERATIONS

They worked directly with West to select the container closure system that they believed would work best for their drug and they worked with a CDMO to assist with drug development.

THE SOLUTION

During initial discussions West provided the company with valuable insights gained from years of industry experience, such as testing requirements, timelines, and guidance on avoiding potential delays.

The company realized the value they could obtain from working with an expert on containment and selected West's Integrated Services and Solutions. Integrated Services and Solutions simplified the process for them by providing a robust roadmap guiding them through containment requirements and allowing them to focus their resources and time on their core biologic drug development. West is currently executing an array of studies and testing to support their pipeline drugs.
